Course Description

While new construction is going on all around us, most permit applications received are in relation to existing buildings, whether they are undergoing tenant improvements, addition or changes in occupancy. This course will focus on the requirements of the 2021 IEBC in relation to existing buildings undergoing repairs, alterations, additions, or change in occupancy. A discussion on the multiple compliance paths provided in the IEBC will be had, with table outlining the key differences between each. The triggers to update key structural, fire & life safety, means of egress, and accessibility requirements will be discussed in detail. Requirements for moved structures and historic buildings will also be addressed and some of the changes coming in the 2024 IEBC will be highlighted.

Chris Kimball, PE, SE, FPE, MCP

Mr. Kimball is a licensed civil, structural, and fire protection engineer as well as an International Code Council (ICC) Master Code Professional. He is certified by ICC as a building official, fire code official, combination plan examiner, combination building inspector, and more. He received his master's degree with an emphasis in structural engineering and has performed plan reviews for thousands of projects throughout the United States. Mr. Kimball has authored numerous ICC publications and is also an ICC-approved instructor who regularly provides code training to building officials, design professionals, and contractor organizations throughout the United States.

Sandy City Hall

10000 Centennial Parkway
